**Norway has a vast marine territory and harvests great wealth from the sea. Despite this dependency on the sea, our knowledge of the seabed environment has remained surprisingly poor, but is now slowly increasing.**

**This book presents some exciting, and often spectacular, results from recent mapping of Norway's seafloor and the animals that live there.**

**The Editors wish to thank everyone who has made this book possible. This includes all those who have been part of MAREANO data acquisition, processing and analysis, as well as those directly involved with preparation and editing of text and figures for the book.**
